a) any b) some c) many d) no

II- Compétence Interprétative (40%)

A- Read the text carefully then answer the questions below. (15%)

Cybercriminals

Cybercriminals are individuals or groups who use computers and the internet to commit crimes. They engage in activities such as hacking, spreading viruses, and stealing personal information. Cybercriminals often target businesses, government agencies, and individuals to gain access to sensitive data or financial information.

Many cybercriminals use tactics like phishing, where they trick people into providing their personal information through fake emails or websites. Another common method is ransom ware, which involves locking a victim's computer files until a ransom is paid. These activities can cause significant financial losses and harm the reputation of the targeted organizations or individuals.

To protect against cybercriminals, it is important to use strong passwords, keep software updated, and be cautious of suspicious emails or links. Organizations also employ cyber security measures such as firewalls and antivirus programs to safeguard their networks. Staying informed about the latest cyber threats can help individuals and businesses stay safe online.

C- Rewrite the sentences as indicated in parentheses. (10%)
